Making the most of your investment

Have you ever felt that you or your colleagues are wasting time and money doing the same things over and over again? Or you're not all working to the same standards? Or your presentations aren't quite as good as your competitors'?

Frustrating isn't it?

We think so too. Which is why we've introduced a range of consultancy services, for you to pick and choose from, which are aimed at helping you increase productivity; improve workflow; increase efficiency and – quite simply – save you time and money.

Which consultancy service do you need?

Our technical experts, training professionals and support team have front line experience as architects, engineers and manufacturers, so we know your industry inside out. Which means, straight away, we can see where there are gaps in your team's skill set. Or where we think some improvements might be made.

So we'll work closely with you to find the best mix of professional services for your business, which may include Process Review, Best Practice and Customisation or CAD Standards, Software Asset Management and Content Creation.

And our consultancy services are completely flexible. So our experts can be on site for a day, a week, or over a number of months.

Talk to the team now.

You shouldn't have to work harder. But we think your software should.

Talk to the experts about achieving a highly efficient design environment. Choose from the Professional Consultancy Services options below:

Service	Deliverable
Essentials Package	Ideal for users that are new to CAD, this package delivers Telephone Support, Installation and Training that is designed to get you working and keep you working.
Adopting CAD Standards	Ensure that your design team is producing consistent, high quality work to CAD drawing standards.
Scripting	Automate almost any combination of standard drawing commands and reduce the number of mouse clicks by creating time saving scripted CAD routines.
Template Creation	Start a new drawing using a template file configured with all your favourite settings including title blocks, layers, text, dimension and line type styles.
Legacy Data Integration	AutoCAD legacy data can include titles blocks which in the main have attributes and these fields can be read into Productstream and synchronized. This process identifies the fields in the drawing required and intelligently linked to Productstream.

Professional CAD Consultancy Services for Architecture, Engineering, Construction, Geospatial and Plant Design

Talk to the experts about achieving a highly efficient design environment. Choose from the Professional Consultancy Services options below:

Service	Deliverable
Essentials Package	Ideal for users that are new to CAD, this package delivers Telephone Support, Installation and Training that is designed to get you working and keep you working.
Content Creation	Standardise and reuse data. We can produce libraries of intelligent, feature rich content for those instances where the standard references to parts won't suffice.
Tailored and Project Based Training	Working with your data sets, training is designed around your own project work and your design procedures.
Implementation and Deployment	Take advantage of the significant experience we have gained installing, licensing, packaging and configuring software products to guarantee rapid deployment to your users.
Adopting CAD Standards	Produce consistent, high quality work to standards that reflect your methods and processes.
Process Review	We will review your process from design intent, through CAD application and use of data; to report on areas of improvement to produce realistic, tangible results.
Implementing New Technology	For new projects we advise on the managing, implementation and training of your users as they become confident and proficient with their new software.
Customisation	We can customise your software and interface to more closely reflect your preferred working methods.
Adopting Best Practice	We will establish a design workflow using industry recognised best practice procedures for enhanced productivity and consistency.
CAD Bureau	We provide a CAD drawing and modelling service across all industries and products in the file format of your choice and to strict deadlines.
Data Analysis and Migration	We will analyse your existing design data and propose and deliver a programme of data migration that can implement your new CAD software seamlessly.
Data Management	We will help you to implement a management system that addresses version control, data security and shared design information.
Software Asset Management	We can work with you to identify your licence usage and installed base by reconciling your purchase history, monitoring usage and auditing your licence servers and workstations. With a detailed and current licence inventory you can guarantee that you are licence compliant.
Visualisation and Animation Review	We will analyse your current design process and identify a programme of configuration and training to allow you to quickly take your existing designs to produce professional, realistic views of your product.

Professional CAD Consultancy Services for Data Management

360° support

Passion Integrity Expertise Teamwork

Talk to the experts about achieving a highly efficient design environment. Choose from the Professional Consultancy Services options below:

Service	Deliverable
Data Assessment	An analysis of existing legacy data is undertaken to identify key file types and data sizes to aid the smooth transition of all required files to be imported into the Vault.
Vault , Vault Workgroup and Vault Collaboration – Single Site Deployment	To install and implement data management at a single site.
Vault , Vault Workgroup and Vault Collaboration – Additional Site Deployment	To install and implement data management at an additional site from the main site.
Vault , Vault Workgroup and Vault Collaboration – Multi Site Deployment	When an organisation needs to synchronise several Vault sites together to enable data to be common and up-to-date between all sites, then the data can be replicated and kept current to ensure everyone is working on the latest revisions.
Data Management with Vault Manufacturing	Management of design files and associated documentation is one of the most neglected tasks in a design environment. However, there are many benefits from implementing a management system including version control, data security and the ability to share design information to any number of team members outside of the design team. We will work with you to identify the right solution for your workflow and build an implementation and training programme to ensure that the solution is customised for your data and processes.
